

App. Serial No.: 10/662,993  
Atty. Docket No.: 0003-032P1

**IN THE SPECIFICATION**

Please amend the specification as follows:

The paragraph beginning at Page 10, Line 16:

Tee fitting 700 is similar to tee fitting 200 of FIG. 2, except that branch tube 708 has a larger diameter than run tube 702. Because branch tube 708 has a larger diameter ( $A_2$ ) than the diameter ( $A_1$ ) of run tube 202, the shape of throat section 712 is different from the shape of throat section 212. First, front wall 722 and back wall 724 are angled out (and optionally lengthened) to accommodate the larger diameter of branch tube 708, but still engage run tube 702 at its outer edges. Additionally, side walls 726 and 728 become larger near branch tube 708. Alternately, side walls 724 and 726 could remain generally uniform in shape with modification of the size and shape of front wall 722 and back wall 724.
